# HOW IMPROVEMENTS GET MADE (A SIMPLE EXAMPLE)

1. Joe identifies a bug and submits it to Launchpad (New)
2. Kendra confirms the bug (Confirmed)
3. Sam develops a patch to fix the bug (#pullrequest)
4. Carrie installs the patch on a test server, tests it, and signs off on it (#signedoff)
5. A Core Committer reviews the code and adds it to the “Master” code repository (Fix Committed)
6. The Release Manager coordinates the next release (Fix Released)
